The following is an examiner's statement of reasons for allowance: Pilie et al. (US 4485534, figures 1-3 and 5-12) teaches both the article and method for opening and closing two enclosures, one being a room and the other a garment, each with an opening and each with first and second coupling fasteners in the form of zippers with teeth 11, 12, 13, 14 and two sliders 40, 45. The zippers with teeth both act as closing elements for each enclosure and as docking elements for joining the enclosures. In regard to claim 34, Pilie et al. fails to disclose "a coupling seal comprising first and second flexible sealing strips; the first flexible sealing strip comprising an inner side and a top side with at least one first sealing element on its inner side; the second flexible sealing strip comprising an inner side and a top side with at least one second sealing element on its inner side complementary to and meshable with the first sealing strip first sealing element for reversible, tight sealing of the coupling seal with the first and the second sealing strips connected to one another; said top side of the first sealing strip having at least one third sealing element for reversible docking with a first complementary sealing element, and said top side of the second sealing strip having at least one fourth sealing element for reversible docking with a second complementary sealing element" (lines 5-16). This structure defines very different structure from that of Pilie et al. and there is no basis to modify the device of Pilie et al. to have such structure. As to claim 41, Pilie et al. fails to disclose " the first and the second coupling seals each comprising first and second flexible sealing strips; the first flexible sealing strip comprising an inner side and a top side with at least one first sealing element on its inner side; the second flexible sealing strip comprising an inner side and a top side with

Art Unit: 3677

at least one second sealing element on its inner side complementary to and meshable with the first sealing strip first sealing element for reversible, tight sealing of the first and second coupling seals with the respective first and second sealing strips connected to one another; said top side of the first coupling seal first sealing strip having at least one third sealing element for reversible docking with a complementary third sealing element of the topside of the second coupling seal first sealing strip, and a top side of the first coupling seal second sealing strip having at least a fourth sealing element for reversible docking with a complementary fourth sealing element of the top side of the second coupling seal second sealing strip" (lines 5-19). This structure defines very different structure from that of Pilie et al. and there is no basis to modify the device of Pilie et al. to have such structure. In regard to claim 50, Pilie et al. fails to disclose "the first sealing strip of the first and second coupling seals comprising a first sealing element at a side and a third sealing element at a top and the second sealing strip of the first and second coupling seals comprising a second sealing element at a side and a fourth sealing element at a top; for closing the first and second coupling seals, the first sealing element of the first sealing strip engaging with the second sealing element of the second sealing strip; and for engaging the first sealing strip of the first coupling seal with the first sealing strip of the second coupling seal the third sealing element of the first coupling seal first sealing strip engaging with the third sealing element of the first sealing strip of the second coupling seal, and for engaging the second sealing strip of the first coupling seal to the second sealing strip of the second coupling seal the fourth sealing element of the first coupling seal second sealing strip engaging with the fourth

Art Unit: 3677

sealing element of the second coupling seal second sealing strip" (lines 22-36). This structure defines very different structure from that of Pilie et al. and there is no basis to modify the device of Pilie et al. to have such structure. In regard to claim 55, Pilie et al. fails to disclose a method including "providing the first sealing strip of each of the first and second coupling seals with a first sealing element at a side and a third sealing element at a top and providing each of the second sealing strips of the first and second coupling sleeves with a second sealing element at a side and a fourth sealing element at a top" (lines 22-26). This method defines very different structure from that of Pilie et al. and there is no basis to modify the device of Pilie et al. to have such structure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 34-48, 50-53, 55 and 56, renumbered 1-21 respectively, are allowed.

The German foreign priority document 10-2004-003-511.3 filed 1/23/2004 has been made of record in the case and is attached as an appendix.
